

ANUDIT KHATRI

Kathmandu, Nepal|+977 9841357942|github.com/arthurrgg8-lgtm|instagram.com/reel/DWVid1DjO3m/

PROFESSIONAL SUMMARY

Security-focused Software Developer with specialized experience in **Forensic Biometrics** and **IT Security**. Proven track record of collaborating with government security agencies to develop high-stakes identity verification systems and forensic intelligence tools. Expert in **Python and Rust**, with deep expertise in AI-driven face verification, deepfake detection, and persistent monitoring services. Bachelor of Computer Applications graduate with a focus on bridging advanced backend architecture with mission-critical security applications.

TECHNICAL SKILLS

Languages: Python (Advanced), Rust, TypeScript, JavaScript, PHP, SQL (SQLite/MySQL), Shell Scripting
Security & AI: Biometric Verification, Deepfake Detection, InsightFace, MediaPipe, ONNX Runtime, Forensic Analysis
Frameworks: React 19, Astro, Tailwind CSS v4, Streamlit, Tkinter, Vite, Docker, Git
Environment: Linux (Debian/Ubuntu/Victus-HP), Windows Batch, Android Security Logic

PROFESSIONAL EXPERIENCE

Security Agencies (Government)

Nepal

Independent Developer / Security Consultant

- Collaborated with various government agencies to provide technical insights and develop forensic-grade intelligence tools.
- Contributed to the design of secure data handling and biometric verification pipelines for sensitive environments.

Laba IT Training Centre

Kathmandu, Nepal

IT Security Intern

- Gained hands-on experience in network security auditing and defensive security configurations.
- Assisted in the deployment and testing of security protocols for enterprise-level infrastructure.

TECHNICAL PROJECTS

Lazybiointel-v6.2-PRO — Biometric Identity System

Python, Shell, InsightFace, MediaPipe, OpenCV, Streamlit

- Developed a forensic-grade face verification system utilizing a **dual-engine pipeline** for 512-dim embeddings and geometric symmetry analysis.
- Engineered an **Age-Robust Fusion Engine** that crops the periocular region to maintain stability across 5–10 year age gaps.
- Implemented **Zone Selector Heuristics** to detect occlusions and dynamically adjust weights for identification confidence.

Deepfake-Analyzer — Forensic Workbench

Rust (Core), Python (Bridge), ONNX Runtime, SQLite, Streamlit

- Architected a **hybrid Rust-Python system**, leveraging Rust for core image analysis and benchmarks while utilizing a Python bridge for AI model inference.
- Integrated localized **Access Control** with a SQLite-backed authentication system for secure analysis environments.
- Built a visualization frontend in Streamlit to provide forensic scoring and visual verdicts for manipulated media.

Cafe Billing System — Local POS

Python, SQLite, Tkinter, Windows Batch

- Designed a standalone **MVC-based POS system** for cashier management with local SQLite persistence and one-click batch deployment.
- Developed the entire business logic layer, from inventory management to billing calculations, for offline restaurant environments.

Kulefang Website — Modern Frontend Portfolio

TypeScript, React 19, Astro, Tailwind CSS v4, shadcn/ui

- Architected and developed a high-performance portfolio website utilizing **React 19** and **Astro** for SSR/static delivery.
- Implemented utility-first styling with **Tailwind v4** and **shadcn/ui** to achieve premium UX and Lighthouse performance scores.

EDUCATION

Bachelor of Computer Applications (BCA)

Completed

Texas International College, Tribhuvan University — 2020 Batch
